Humans may crave absolute certainty; they may aspire to it; they may pretend, as partisans of certain groups do, to have attained it. But the history of science---by far the most successful claim to knowledge accessible to humans---teaches that the most we can hope for is successive improvement in our understanding, learning from our mistakes, an asymptotic approach to the Universe, but we proviso that absolute certainty will always elude.

Select the following that best expresses the main conclusion of the argument above.

(1) Science carries us towards an understanding of how the world is, rather than how we would wish it to be.

(2) We should not accept scientific understanding as a final truth at any stage as there is always scope for improvement.

(3) Due to lack of certainty science is not assisting us to take charge of our future and therefore we need to depend on godmen for assurance.

(4) We should accept the scientific facts without criticism if they come from scientists.

Humans may crave absolute certainty; they may aspire to it; they may pretend, as partisans of certain groups do, to have attained it. But the history of science---by far the most successful claim to knowledge accessible to humans---teaches that the most we can hope for is successive improvement in our understanding, learning from our mistakes, an asymptotic approach to the Universe, but we proviso that absolute certainty will always elude.
Sunspots are relatively cool dark areas developed on the surface of the sun periodically. It is observed by scientists that high sunspot activity coincides with stormy periods on the earth. Thus, periods of strong and widespread stormy weather that the earth suffers are caused by increased number of sunspots.

Select the best statement of the flaw in the above argument from the following:

1. Argument ignores the influence of low sunspot activity on the earth’s weather system.
2. Argument disputes the fact that storms are resulted from low pressure systems in the earth’s atmosphere.
3. It overlooks the fact that there is always a storm somewhere on the earth.
4. Since two events coincide, argument assumes that one is the cause of the other.

If $X$-axis represents time and $Y$-axis represents speed then select the appropriate graph that represents following information.

Immediately after sky diver leaves the airplane person starts falling faster and faster until he or she reaches maximum speed which is referred as terminal velocity. Person continues to fall at this speed until parachute opens. Parachute lowers person’s speed until much smaller speed is reached. This speed remains constant until person touches the ground.
